DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: on page 11, line 25, "know" should be --known--.

Appropriate correction is required.

Claim Objections

Claim 15 is objected to because of the following informalities: N-acetyl-3,5-dichlorotyrosine should be spelled without the "p". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 10-12 and 14-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Independent claims 10, 12 and 15, each recite "A method for raising antibodies to 3-chlorotyrosine comprising the use of an antigen formed by..." However, the claims do not recite how the antigen is used to raise antibodies. That is, the claims are vague since the preamble recites a method for raising antibodies, but the body of the claims do not recite how the antibodies are raised.

Claims 11 and 14 are rejected under 112, second paragraph because they depend from claims 10 or 12, which are vague for the reason set for the above.

Allowable Subject Matter

Claims 6-9 are allowed.

Claims 10-12 and 14-15 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter for claims 6-11: 3-(3-chloro-4-hydroxy-benzyl)-6-mercaptomethyl-piperazine-2,5-dione was not found in the prior art.

The following is a statement of reasons for the indication of allowable subject matter for claims 12-14: a method for raising antibodies to 3-chlorotyrosine using an

antigen formed by covalently linking N-acetyl-3-chlorotyrosine, or N-acetyl-3,5-dichlorotyrosine to a carrier protein was not found in the prior art.

Response to Arguments

Applicants' arguments filed March 29, 2007 have been fully considered. Applicants have canceled claims 1-5 and 13 to put the application in condition for allowance according to the previous Office action. However, upon further consideration, the above 112, second paragraph rejections were found, as well as some objections.
